EDUCATION

Army Institute of Technology (University of Pune)

Bachelor of Engineering (B.E) in Information Technology

Pune, IN

06/2016 – 06/2020

CGPA: 8.97/10

Relevant Coursework: Data Structures and Algorithms, OOPS, Data Science & ML, Generative AI Foundations, Cloud Computing, System Design.

TECHNICAL SKILLS

Programming Languages: Python (Expert), Java, C++, C#, Go, C, Julia, JavaScript, TypeScript, SQL.

AI & Machine Learning: Large Language Models (LLMs), Prompt Engineering, RAG (Retrieval-Augmented Generation), Natural Language Processing (NLP), Fine-tuning, RLHF concepts, LangChain, PyTorch.

Cloud & DevOps: AWS (EC2, Lambda, S3), Azure, GCP, Docker, Git, CI/CD, JIRA, SonarQube.

Frameworks/Tools: .NET Core, MVC, Angular, Selenium, Elastic Search, Redis, Kibana, Postman, Swagger.

PROFESSIONAL EXPERIENCE

Software Engineer III

Vision product of Gov-Access division

Granicus

11/2024 – Present

- Architected and developed two high-scale features from scratch using **Python** and **C#**, focusing on data reliability and system throughput.
- Integrated **LLM-based** automated classification and summarization components to enhance the "Vision" product's searchability and user experience.
- Mentored junior engineers in best practices for **Prompt Engineering** and secure AI integration within government-facing software.

Software Development Engineer II

Core Engineering Team

Xplor Technologies

12/2023 – 11/2024

- Engineered core features for Xplor Recreation using a multi-language stack (**Go**, **Python**, **C#**), managing the full SDLC from requirement gathering to AWS deployment.
- Implemented AI-driven diagnostic tools that proactively identified and resolved 20+ critical bugs, improving system performance by 15%.
- Developed high-performance microservices in **Go** and **Java** to handle concurrent data processing for global recreation centers.

Software Engineer

Core ICI and Application Engineering Team

Icertis

07/2020 – 12/2023

- Contributed to the ICI platform, leveraging **NLP** and **ML** techniques to automate clause extraction and contract analysis for 50+ global customers.
- Built and optimized 15+ complex features using **.NET Core** and **Angular**, ensuring seamless deployment on Azure.
- Automated high-coverage use cases using **Python** and Selenium, reducing manual testing cycles by 40%.
- Utilized **Elastic Search** and **Redis** to optimize data retrieval speeds for large-scale contract repositories.

AI & TECHNICAL PROJECTS

AI-Driven Corruption Free Nation

Python, Julia, ML

- Developed a community-centric platform utilizing **NLP-powered Chatbots** (Wit.ai/API.ai) to facilitate transparent decision-making in Municipalities.
- Implemented classification models in **Julia** and **Python** to categorize citizen feedback and detect anomalies in local reporting.

Mitigating Black Hole Attacks in WSN

TCL, C++, NS2

- Designed an expert system to detect intrusions and Black Hole Attacks in Sensor Networks using **C++** and TCL.
- Applied heuristic-based logic to differentiate between standard network failures and malicious intrusions.

ADDITIONAL INFORMATION

- **Problem Solving:** Solved 500+ coding problems on Codeforces, LeetCode, and GFG (Expert in C++, Python, and Java).
- **Technical Versatility:** Proven ability to switch between **Java, Go, C++, and C#** based on system requirements and performance constraints.
